

XTREAM UTD

Product Orbit

Editable Product-Catalogue UI/UX Design System

3D product discovery · responsive catalogue · product details · Messenger-first ordering

Design-only handoff. No production code is included.

1. Product direction

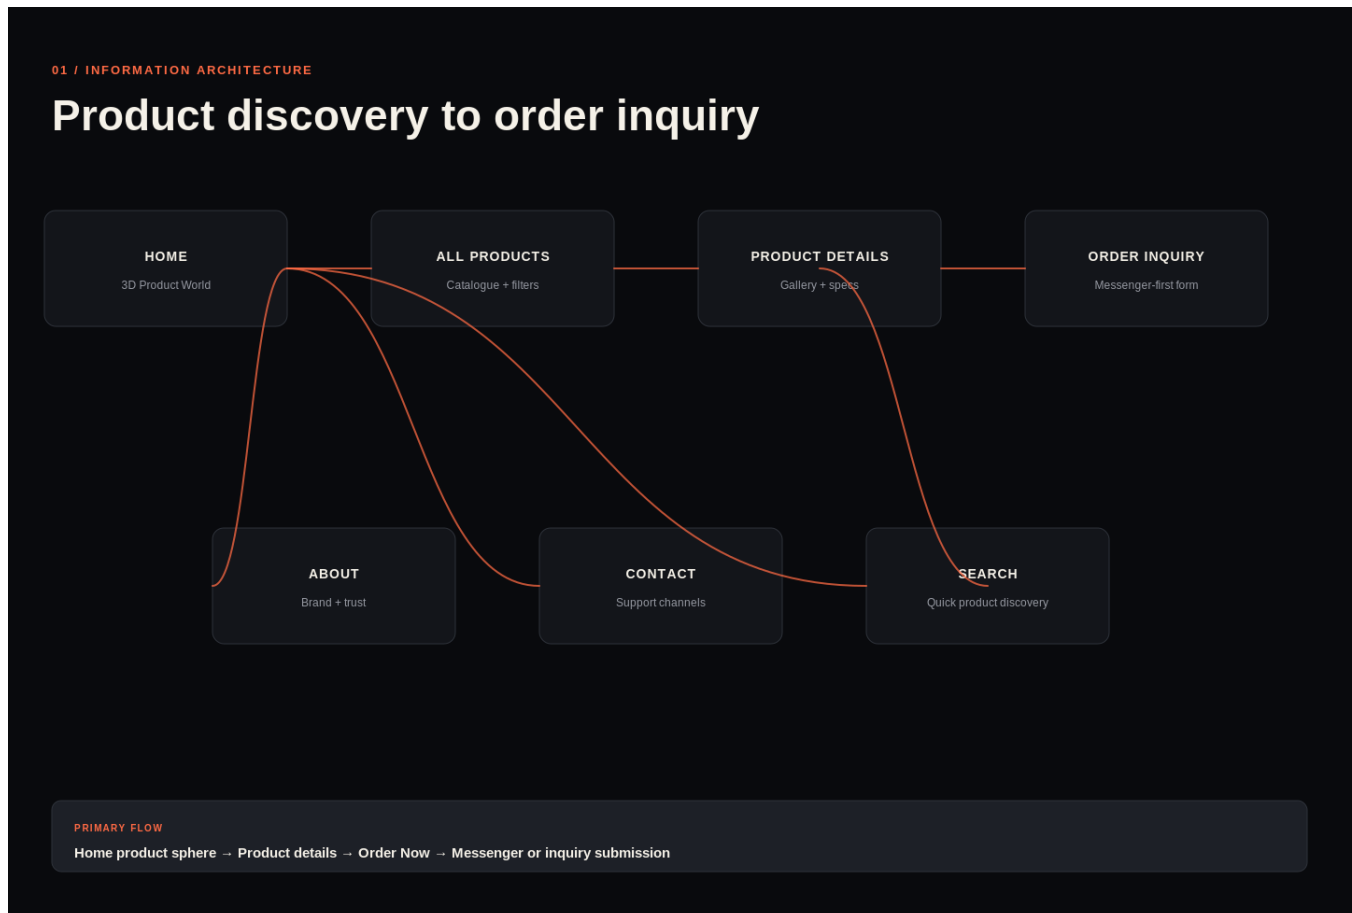

Xtream UTD is presented as a gadget and accessories business rather than a creative-agency portfolio. The experience combines an immersive 3D discovery homepage with a practical product catalogue, dedicated product-detail pages and editable order channels.

Primary customer goals

- Discover useful and trendy products.
- Understand price, discount and stock status immediately.
- Browse by category, search or filters.
- Open a dedicated product page from either the 3D world or catalogue card.
- Place an inquiry through Messenger, WhatsApp, phone or a configurable form.

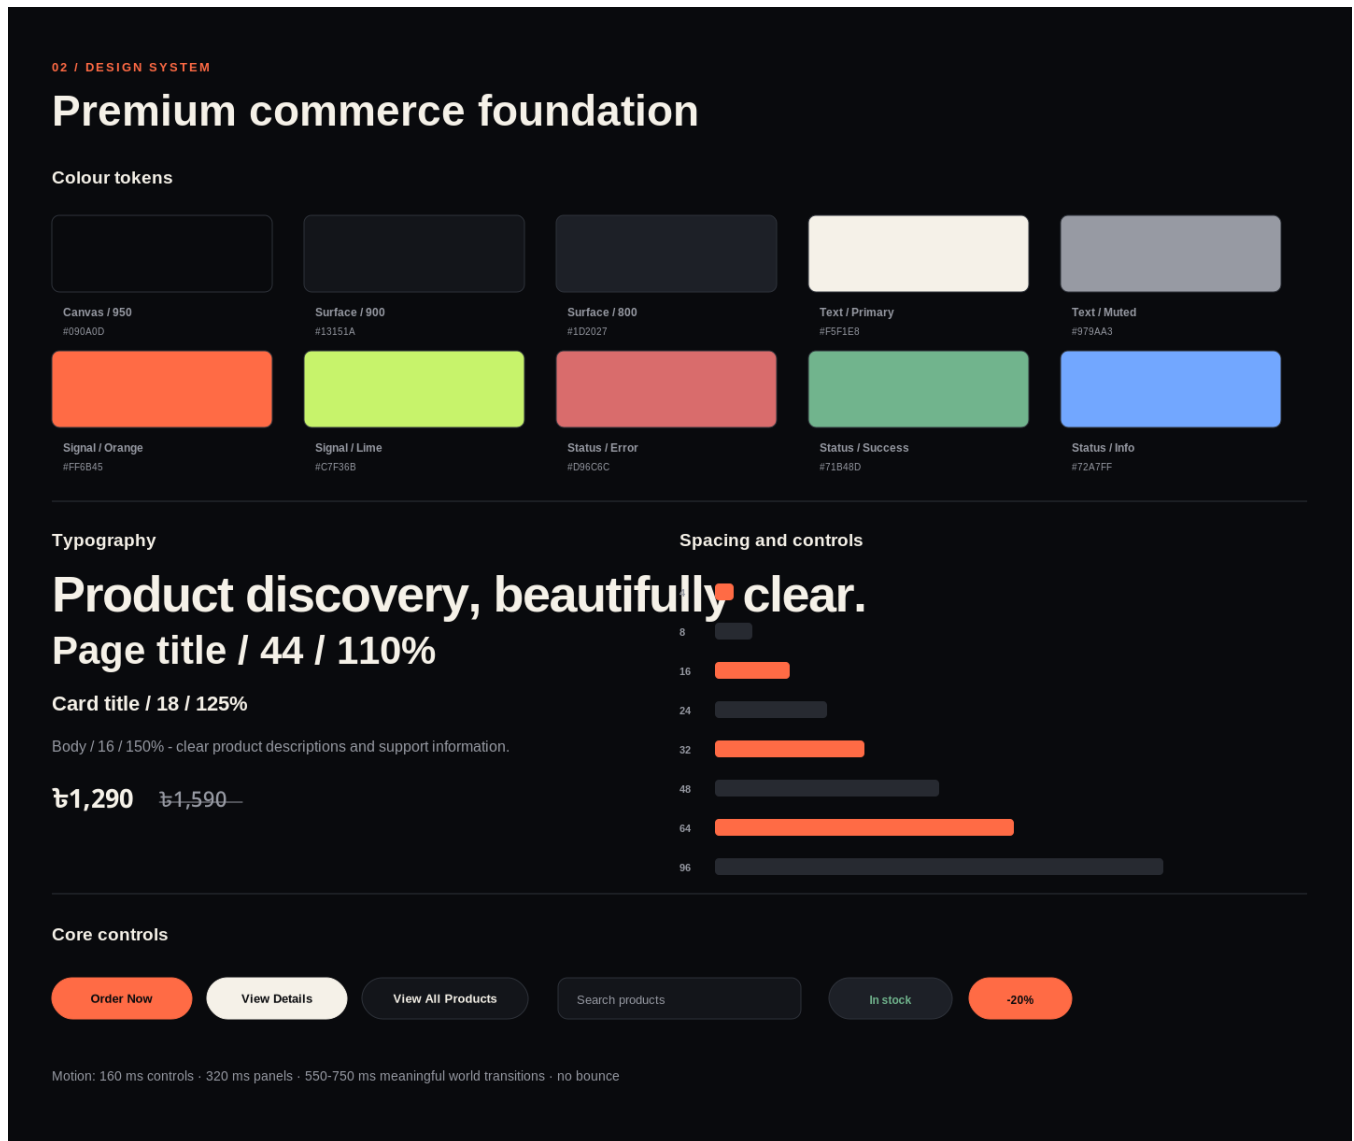

Brand experience

Attribute	Design implication
Premium	Strong typography, restrained colour and spacious composition
Trendy	Product photography and subtle spatial motion create energy
Trustworthy	Clear prices, stock, delivery and support information
Usable	Grid fallback, search and predictable product routes
Mobile-first commerce	Large actions, bottom sheets and simple order flow

Sitemap and primary customer flow

2. Visual system and components

Dark-first product design tokens

Reusable product-commerce components

Navigation and actions

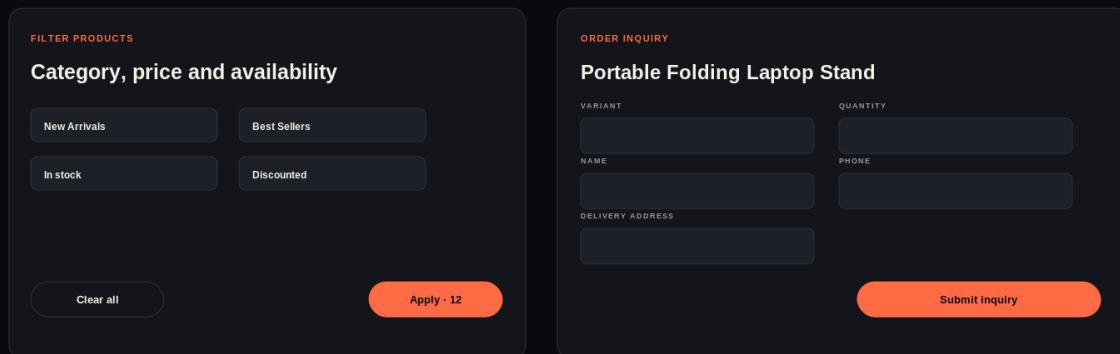

Product cards

Forms and status

Panels

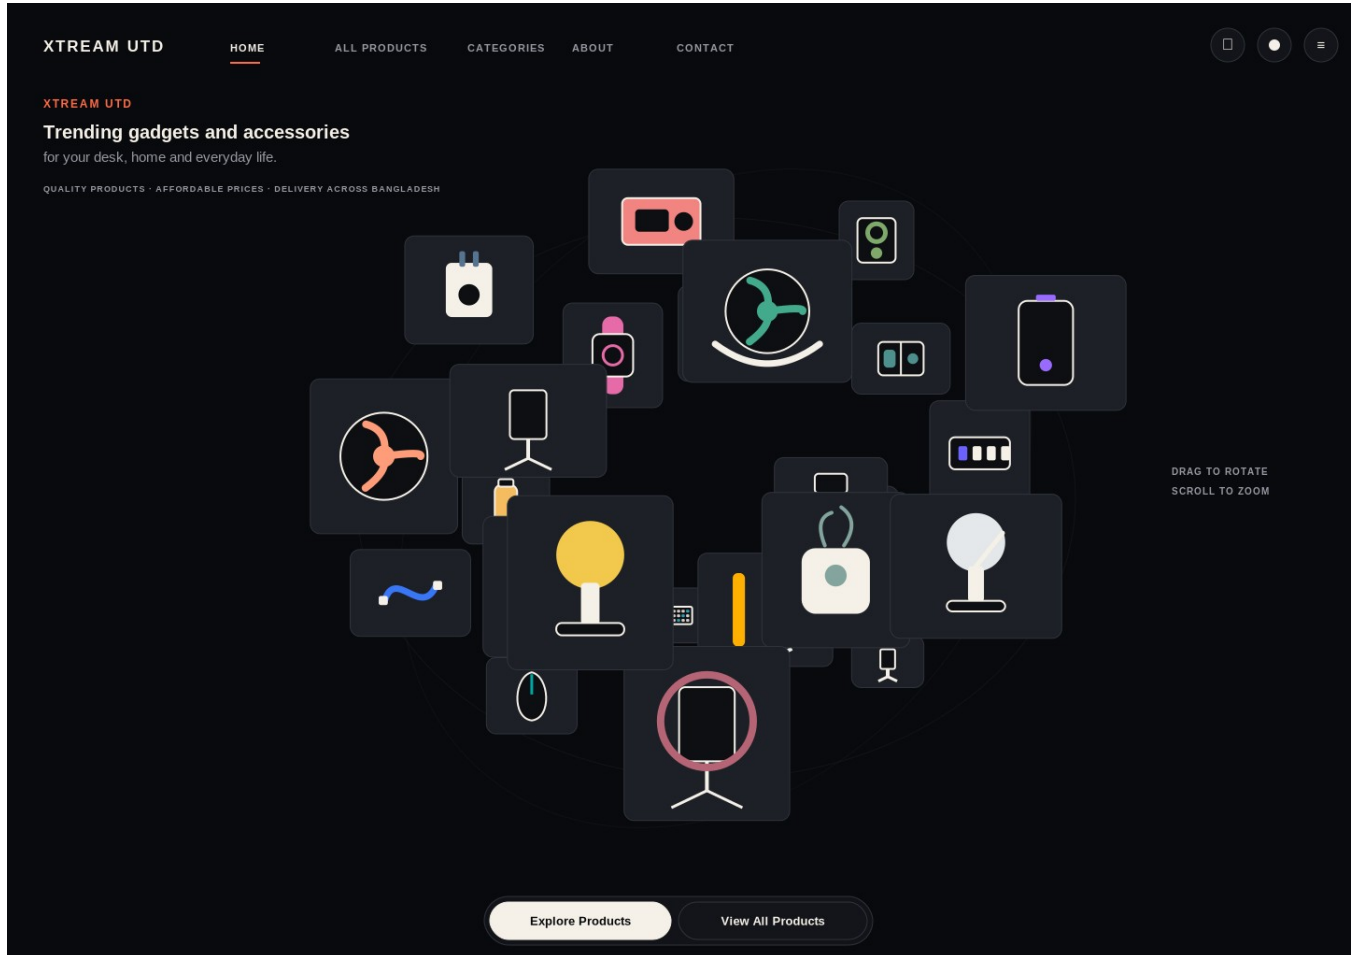

Editable navigation, cards, forms and panel states

Core tokens

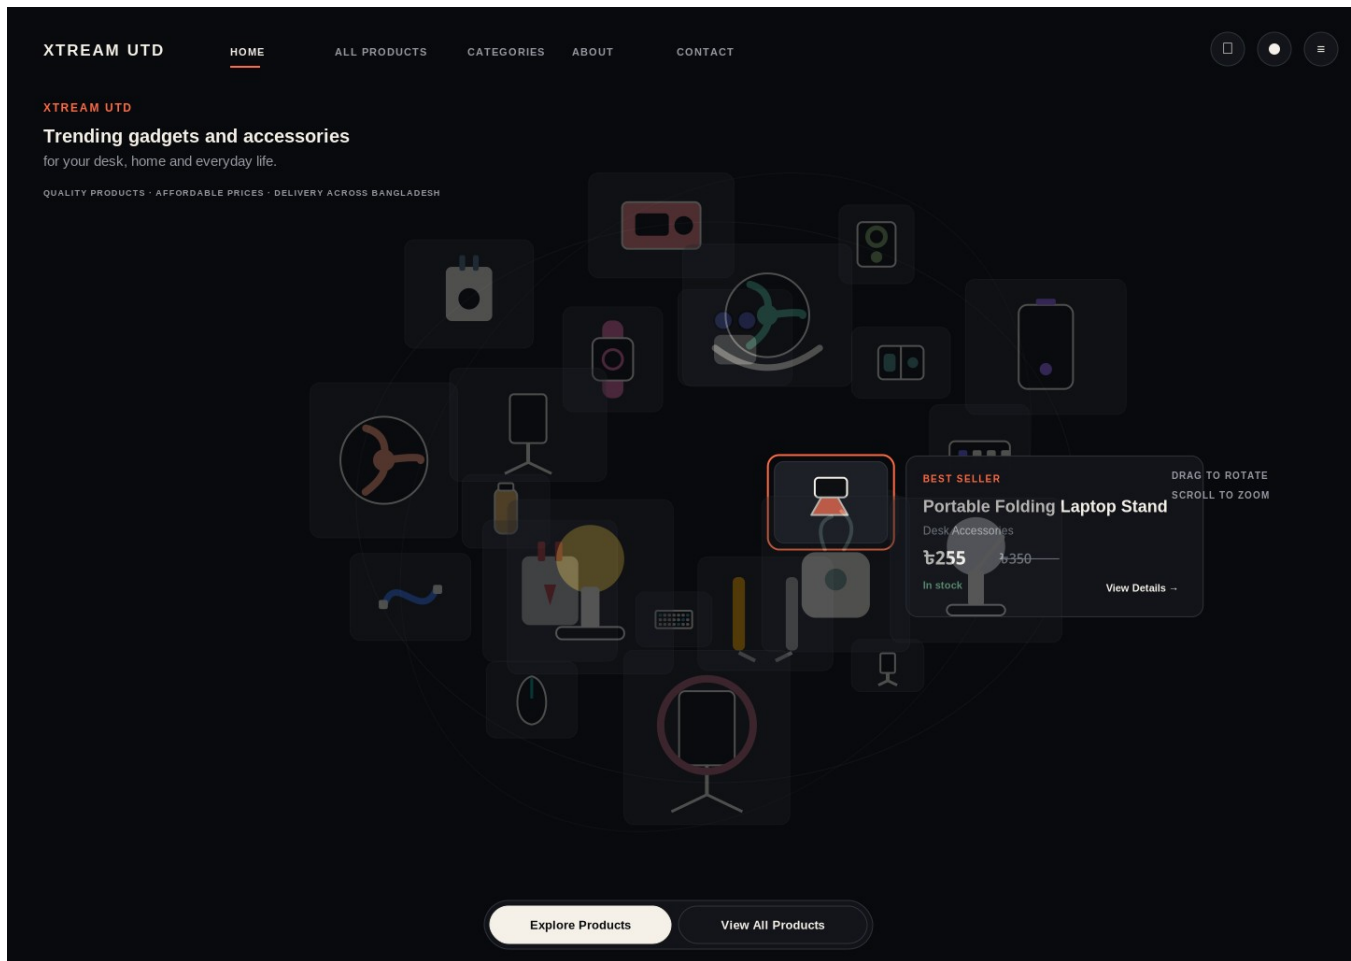

Token	Value	Use
Canvas / 950	#090A0D	Primary dark background
Surface / 900	#13151A	Panels and cards
Surface / 800	#1D2027	Fields and art surfaces
Text / Primary	#F5F1E8	Headings and important product data
Text / Muted	#979AA3	Secondary copy
Signal / Orange	#FF6B45	Selection, primary commerce actions
Signal / Lime	#C7F36B	Optional accent
Success	#71B48D	In-stock and confirmation states

3. Homepage: interactive product world

The homepage remains an immersive full-viewport experience. Actual product images replace project artwork. The header and bottom navigation remain fixed while products rotate and zoom in the world.

Default World view

Hover preview with title, category, price, stock and View Details

4. World states and fallback

Zoomed state with controlled overlap

Dragging state separates rotation from click

XTREAM UTD

PREPARING PRODUCT WORLD

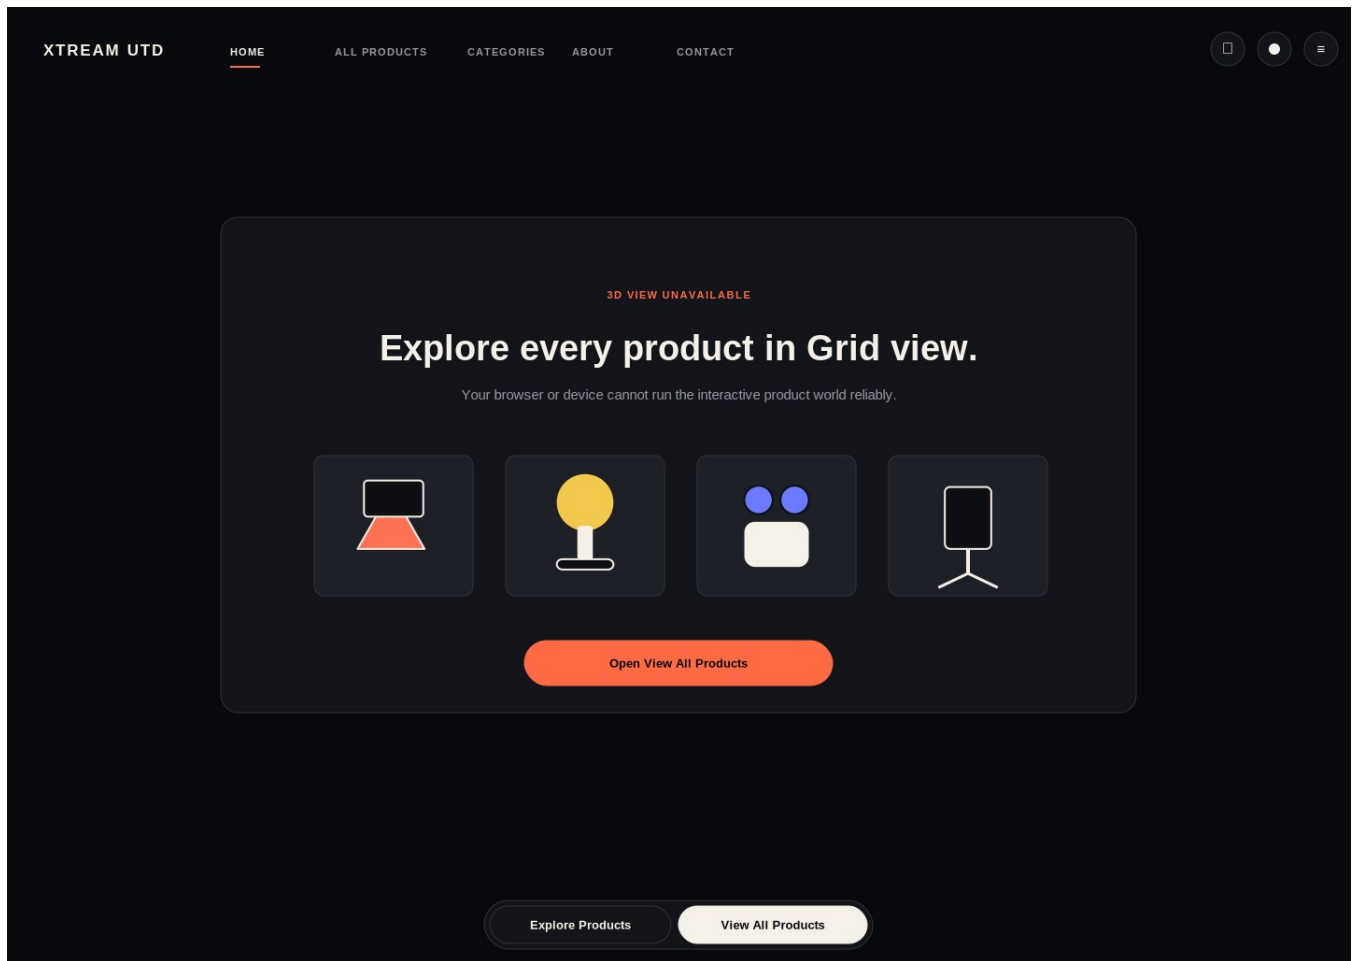

68%

Loading optimized product images and interactions

Short product-image loading experience

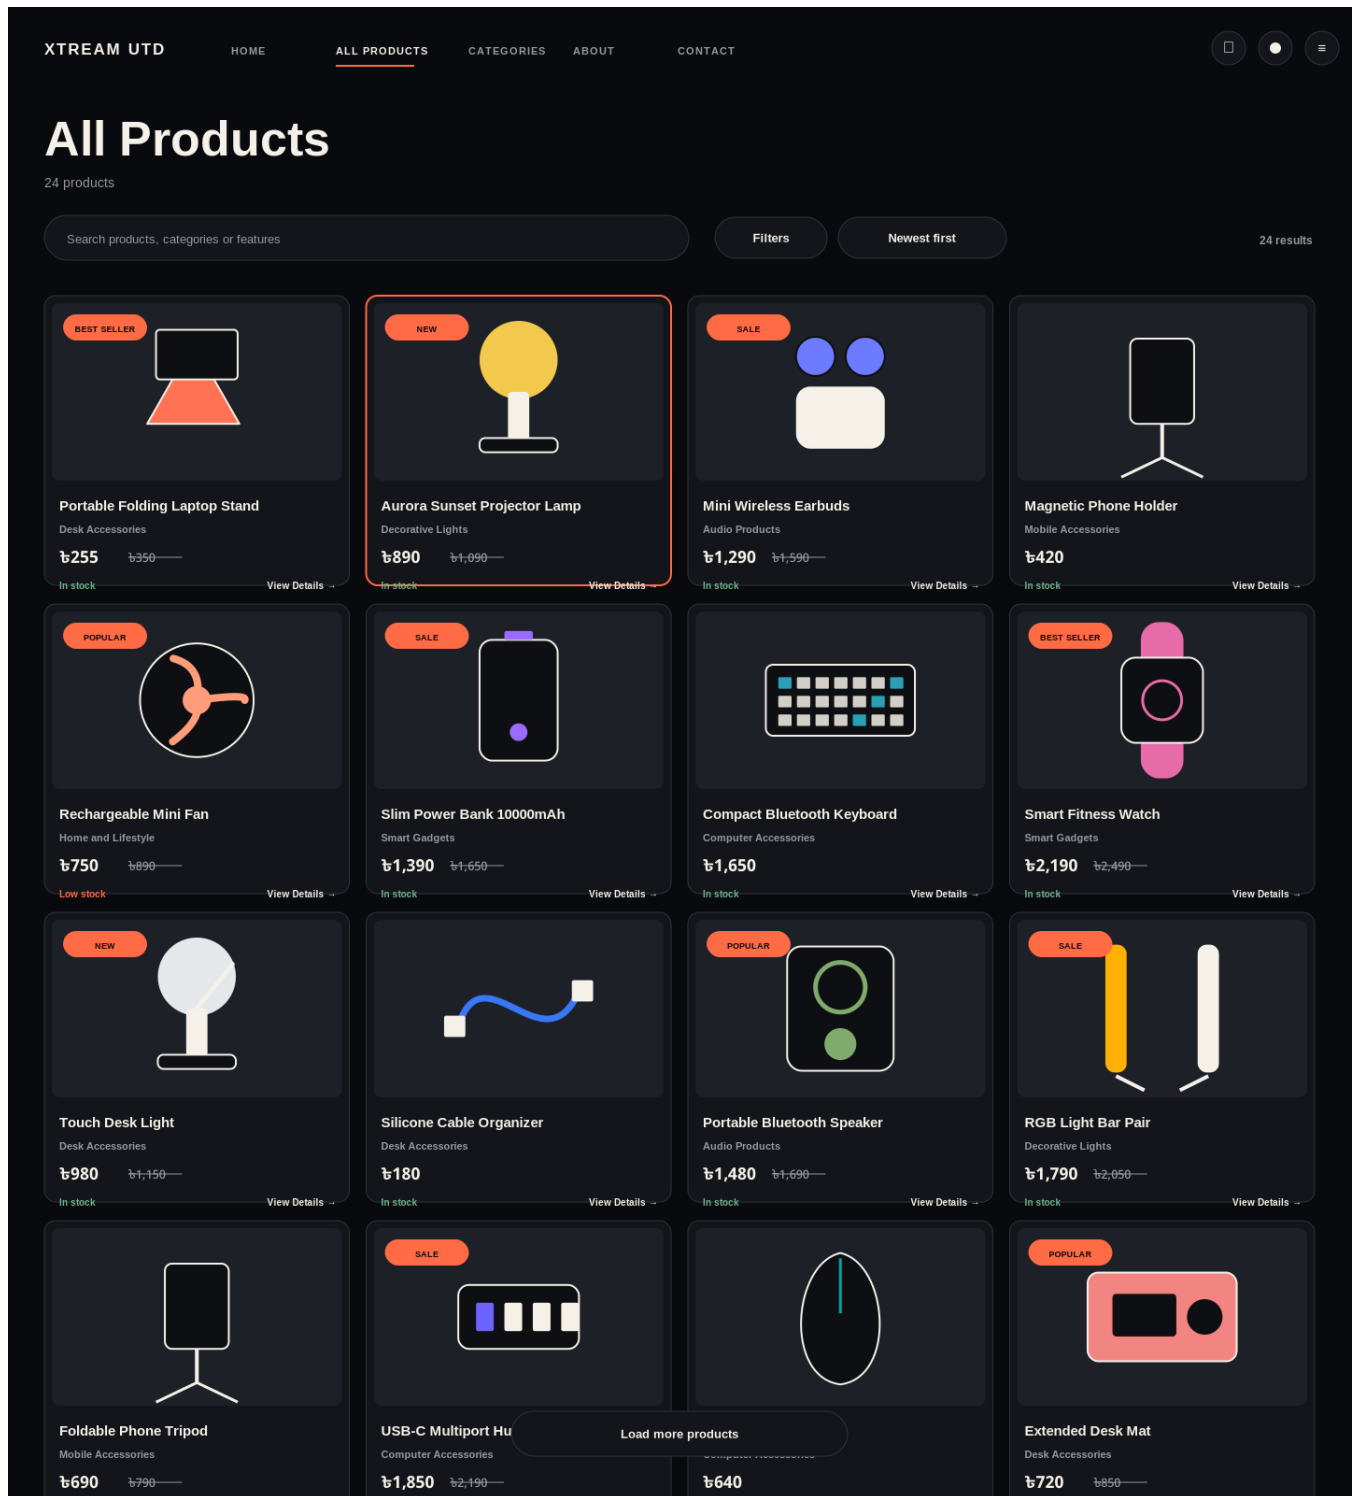

Accessible Grid fallback when WebGL is unavailable

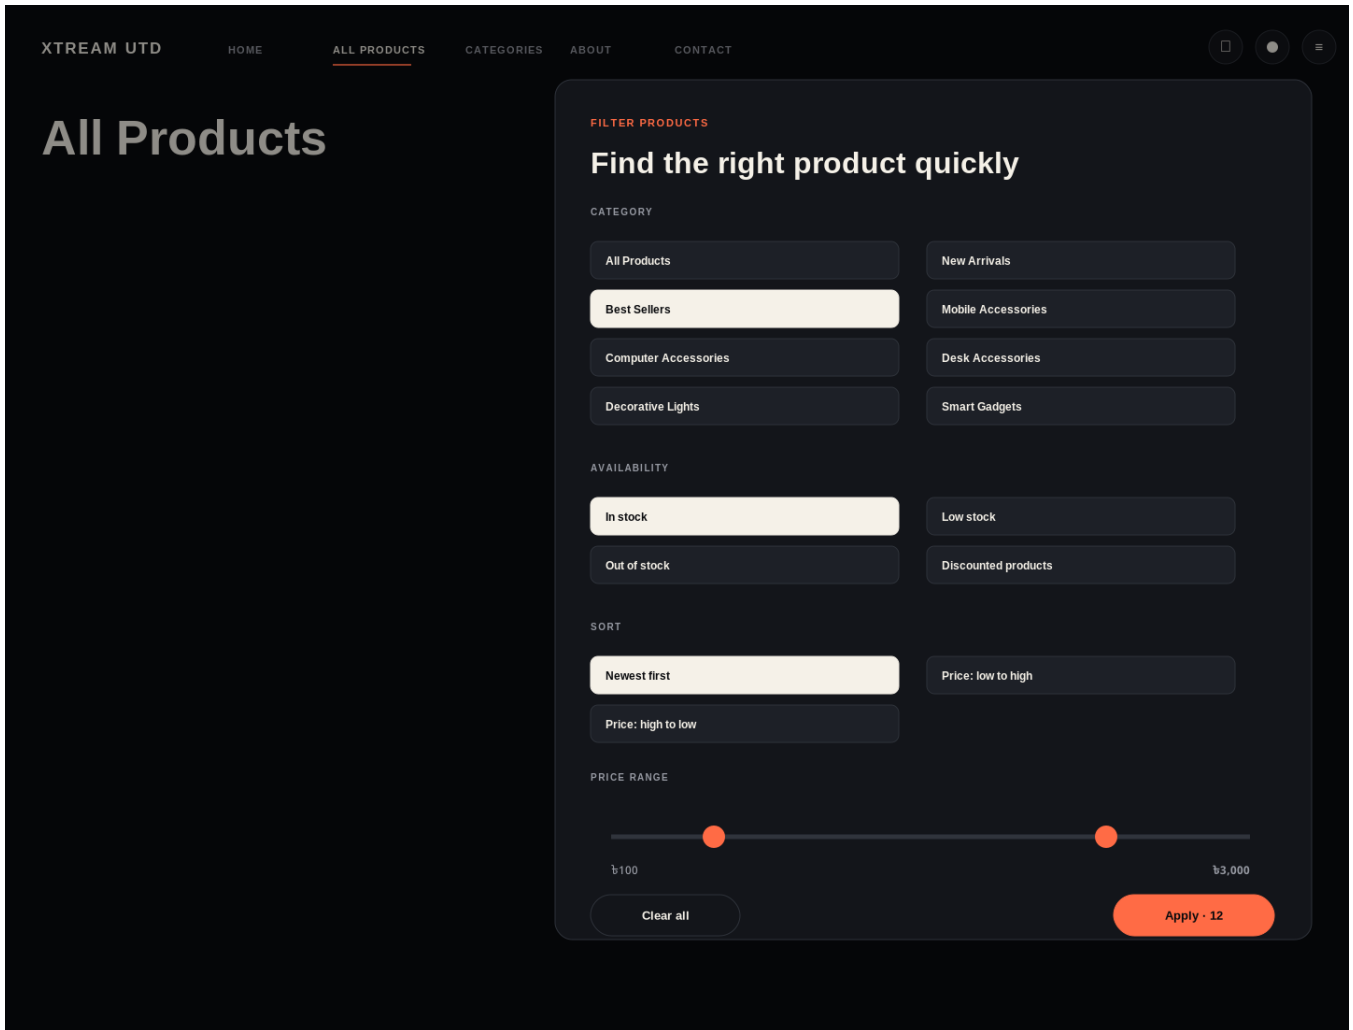

Interaction rules

- Horizontal drag rotates the world horizontally; vertical drag is clamped.
- Pointer movement above approximately 6 px is treated as drag, not click.
- Wheel, trackpad and pinch control zoom within safe minimum and maximum values.
- Products face the viewer and preserve readable images.
- Back navigation restores the previous world rotation, zoom and filter where practical.
- Reduced-motion and low-performance experiences default to Grid.

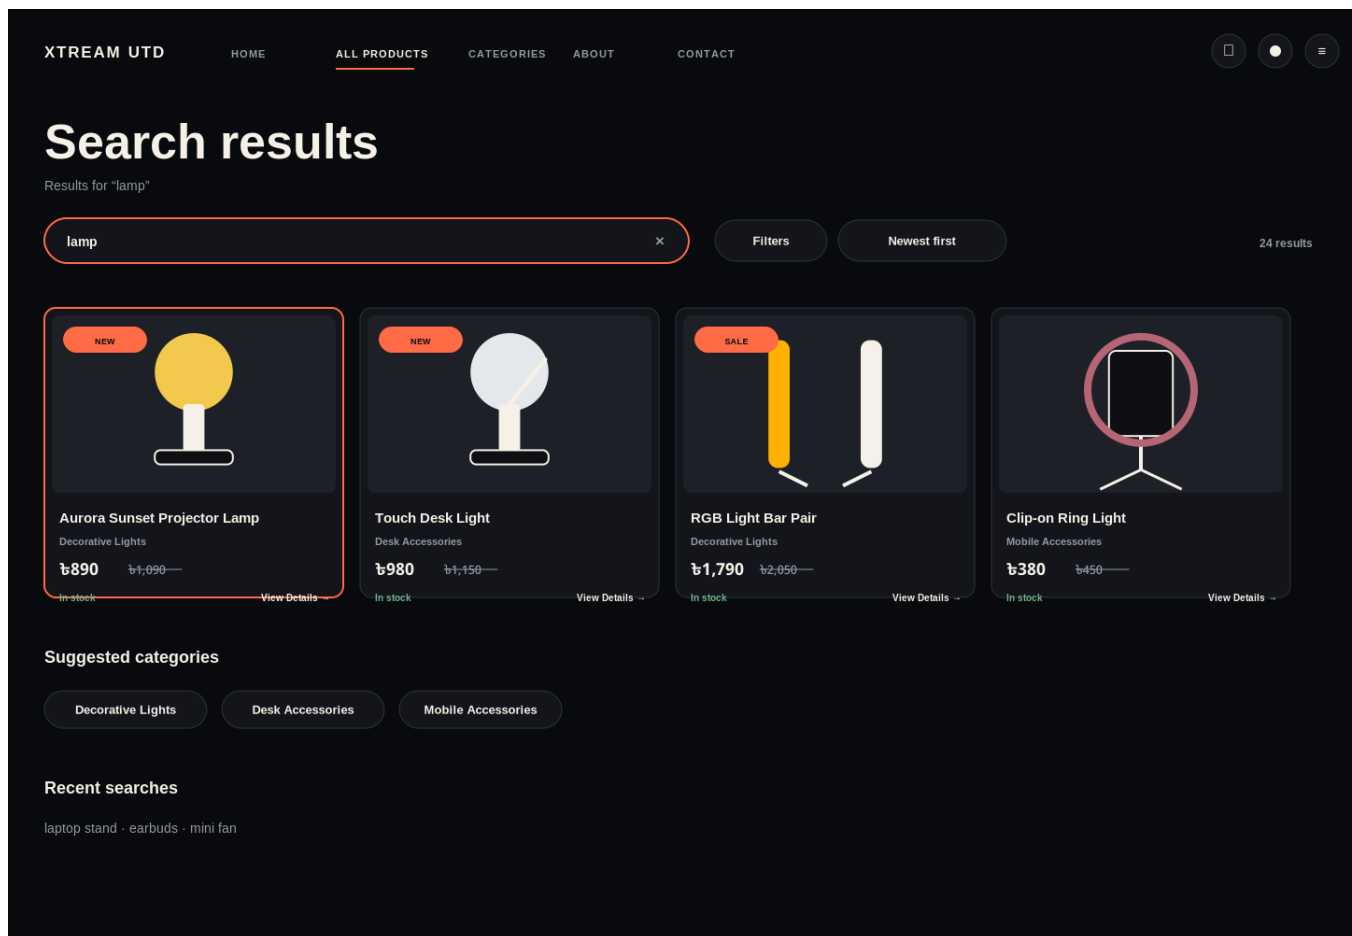

5. All Products catalogue

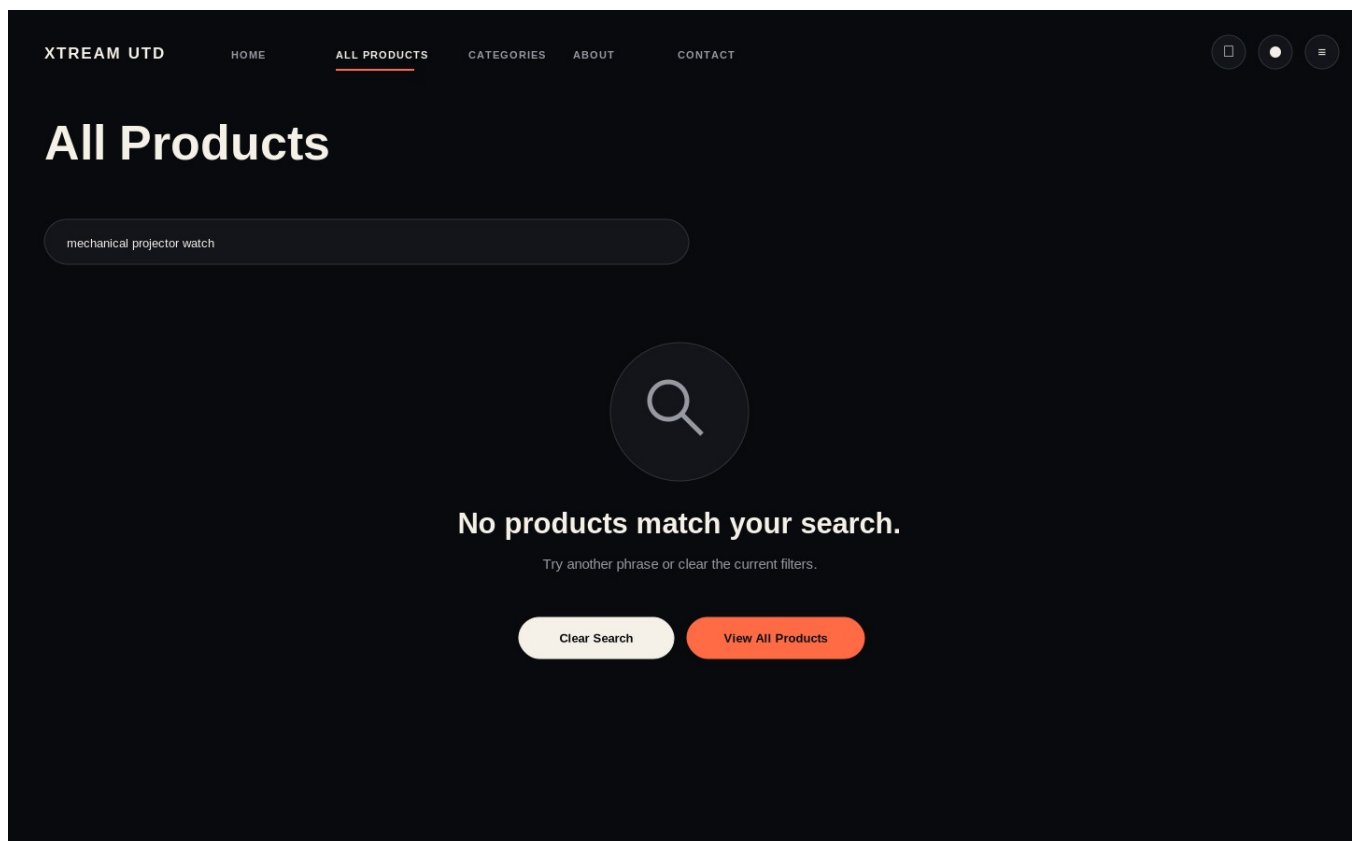

Responsive catalogue with title, current price, old price, category and stock

Desktop filter panel

Search results and category suggestions

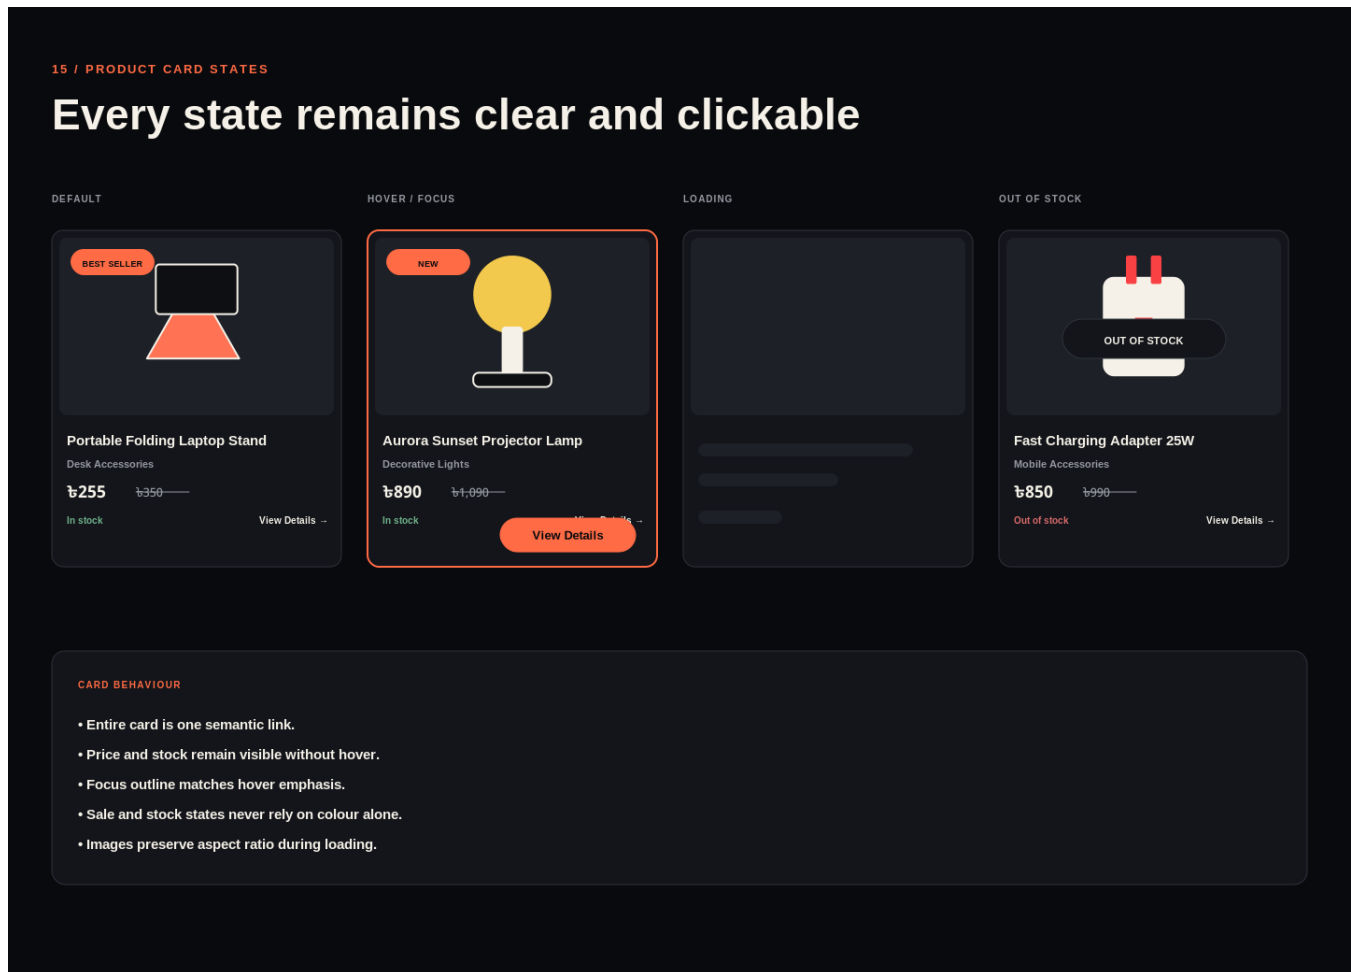

No-results recovery state

5A. Catalogue behaviour

- Four columns large desktop, three small desktop, two tablet, one or two mobile.
- Every card is one semantic link to `/products/[slug]`.
- Search matches title, category, description, features and tags.
- Filter state can be reflected in URL query parameters.
- Price is formatted in Bangladeshi taka and previous price is shown only when valid.

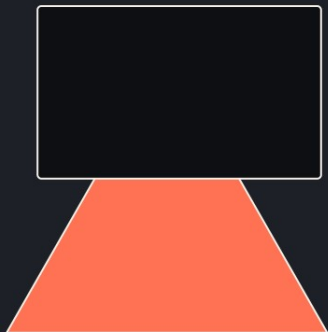

6. Product card and product details

Default, hover/focus, loading and out-of-stock states

Order-channel rule

The primary action is labelled Order Now. Its destination remains configurable: Facebook Messenger, WhatsApp, phone, inquiry form or a future checkout. The current design prioritizes Messenger without hard-coding unverified contact details.

Mobile product filters

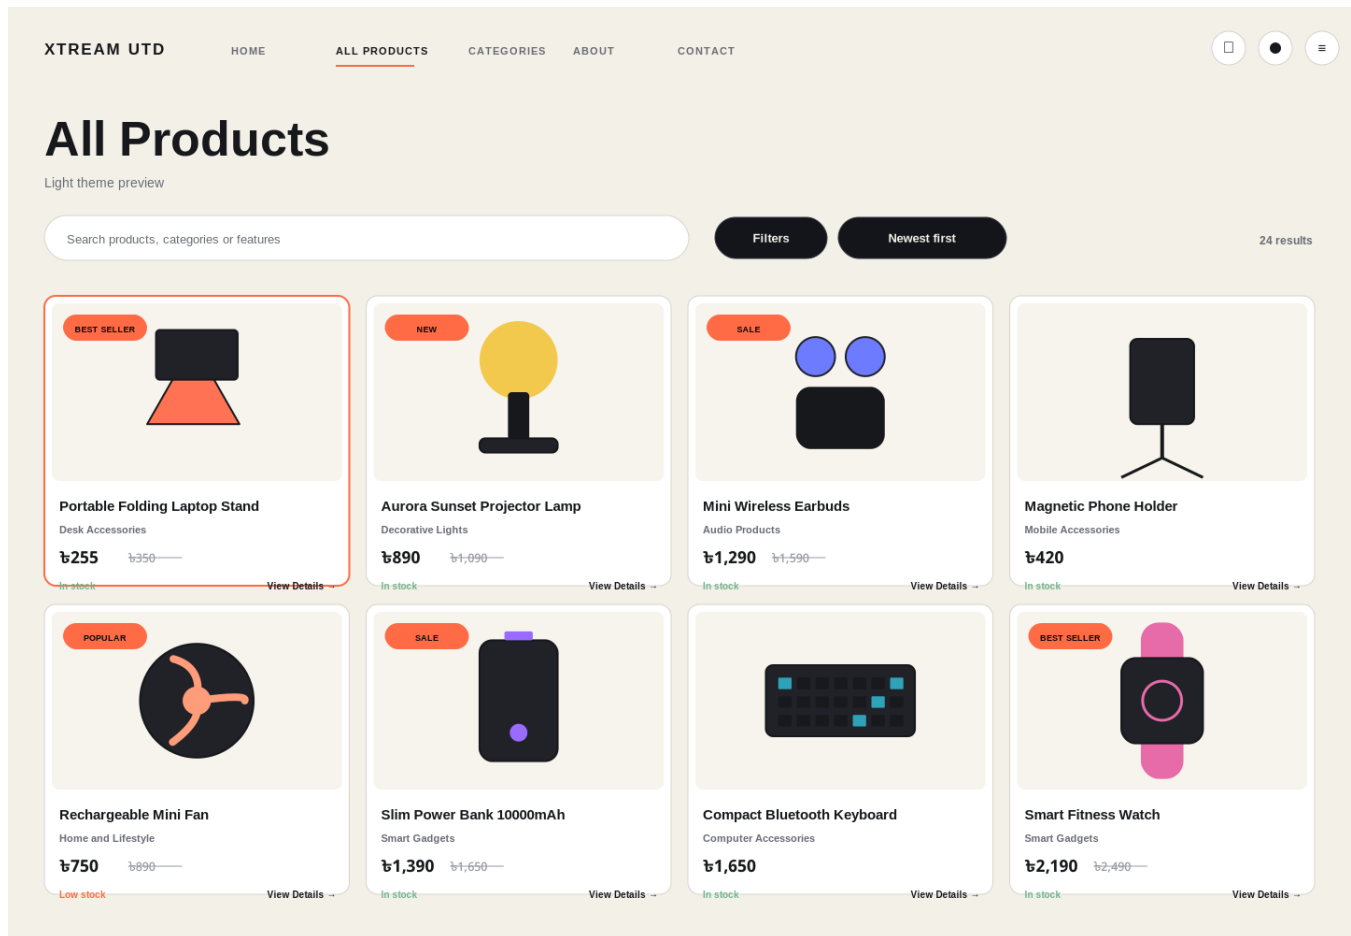

Mobile product catalogue

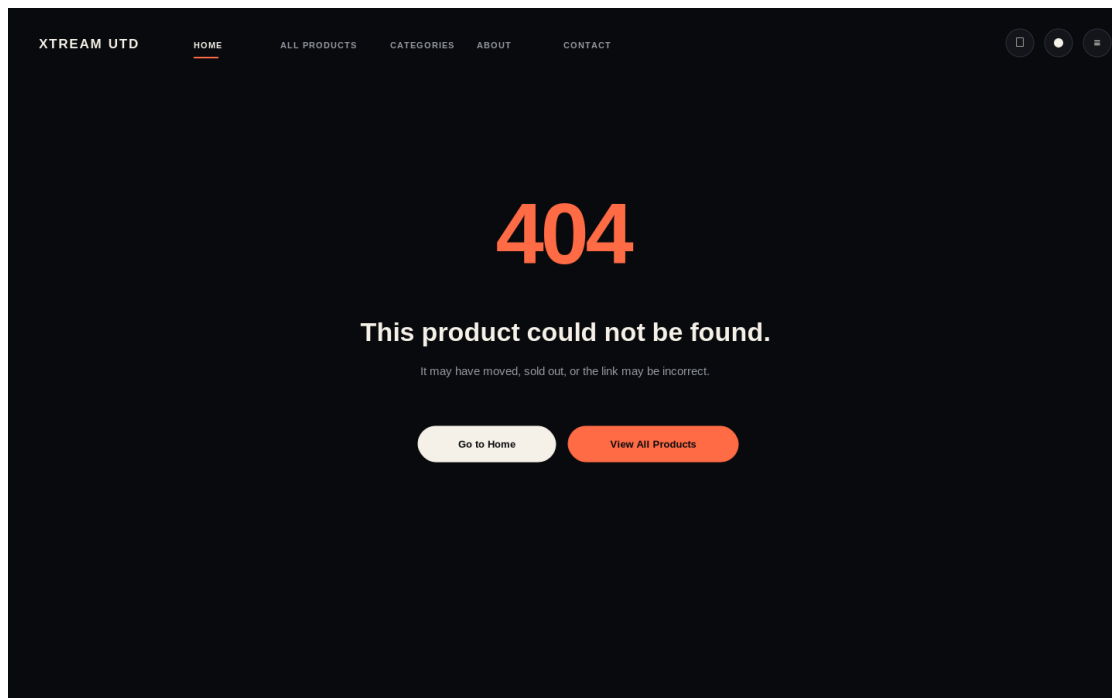

Mobile rules

- Use large 44 px minimum controls and safe-area spacing.
- Use fewer visible products and smaller image textures in World view.
- Replace hover with tap preview or direct details navigation.
- Use bottom sheets for filters.
- Keep View All Products easy to reach.
- Prevent horizontal page scrolling and keep price/order actions visible.

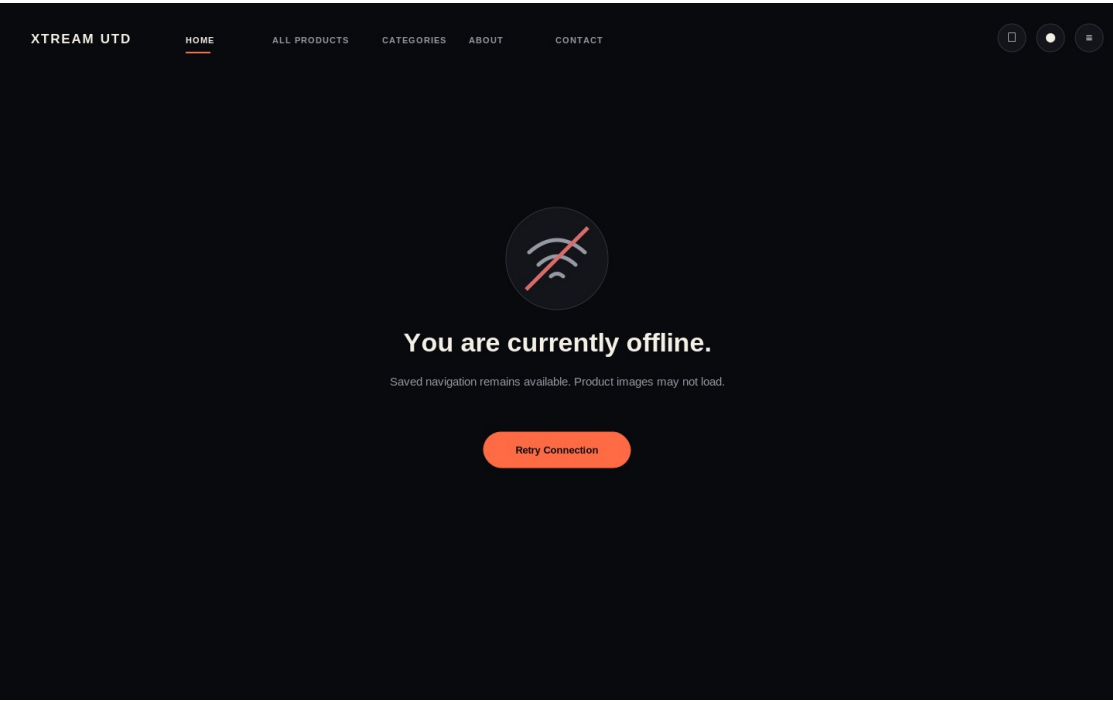

9. Themes, errors and offline behaviour

Editable light-theme token preview

Product-not-found error

Offline state

Fallback hierarchy

Condition	Response
WebGL unavailable	Open Grid with the same products and filters
Low performance	Reduce products, texture quality and motion, then fall back to Grid
Reduced motion	Remove inertia and prefer Grid
Image failure	Keep card dimensions and show a neutral placeholder
Product unavailable	Show out-of-stock state or contextual 404
Offline	Keep cached navigation and provide retry

10. Routes and data contract

Route	Purpose
/	3D product-discovery homepage
/products	Complete product catalogue
/products/[slug]	Individual product details
/about	Brand, trust and product categories
/contact	Support and inquiry channels

The included `data/sample\_products.json` contains 24 editable records with product identity, pricing, stock, media placeholders, features, variants, tags, related products and editable order/Facebook links.

Required data fields

Field	Type
id, slug, title	string
category, subcategory	string
short, full description	string
price, old_price, discount_percentage	number
currency	BDT
stock, quantity_available	status / number
main_image, gallery_images, video	media
features, colours, variants, tags	arrays
specifications	object
featured, new_arrival, best_seller	boolean
order_link, facebook_post_link	editable URL

Pricing rules

- Use the ₳ symbol with thousands separators.
- Show old price only when greater than current price.
- Calculate discount percentage from valid prices.
- Do not hide out-of-stock products unless the selected filter requires it.

11. Accessibility and motion

Accessibility

- Every product is available as a semantic HTML link outside or alongside WebGL.
- Visible focus outline matches the hover state and does not rely on colour alone.
- Escape closes menus, search, filters and inquiry modals.
- Enter or Space activates focused products and actions.
- Touch targets are at least 44 x 44 px.
- Grid is always available as an accessible fallback.
- Product images require descriptive alt text.
- Text and controls target WCAG AA contrast.

Motion

Interaction	Target duration	Behaviour
Control hover	150-180 ms	Simple ease out
Menu/filter panel	280-340 ms	Restrained slide/fade
World entrance	600-900 ms	Controlled deceleration
Product hover	180-240 ms	Small scale/forward movement
Product selection	450-700 ms	Focus and route transition
Filter redistribution	450-650 ms	Smooth no-bounce motion
Reduced motion	0-150 ms	No inertia or large zoom

Development acceptance criteria

- Header and bottom navigation match approved screens.
- Clicking a World product or catalogue card opens its matching details route.
- Back navigation restores prior browsing context where practical.
- Search and filters work with the same normalized dataset.
- Responsive layouts have no horizontal overflow.
- Keyboard and screen-reader paths reach every product and action.
- WebGL failures never block access to products.

12. Editing and handoff notes

- Import SVG boards into Figma, Penpot, Sketch or Illustrator.
- Replace original vector placeholders with real Xstream UTD product photography.
- Change brand copy, categories, pricing and product records without redesigning components.
- Use variables for dark/light theme colours and shared typography.
- Keep Messenger, WhatsApp, phone, delivery and policy values editable until verified.
- Do not flatten important interface content into raster images.

The design is intentionally original and uses the reference video only for the spatial discovery interaction. It does not reproduce the source website's identity, content or layout.
